

Linked Open Dedup Vectors: An experiment with RDFa in Primo

Corey Harper

2011-09-12 – IGeLU

- Problem Statement
- How it works
 - The code
 - The output
- Challenges & Next Steps

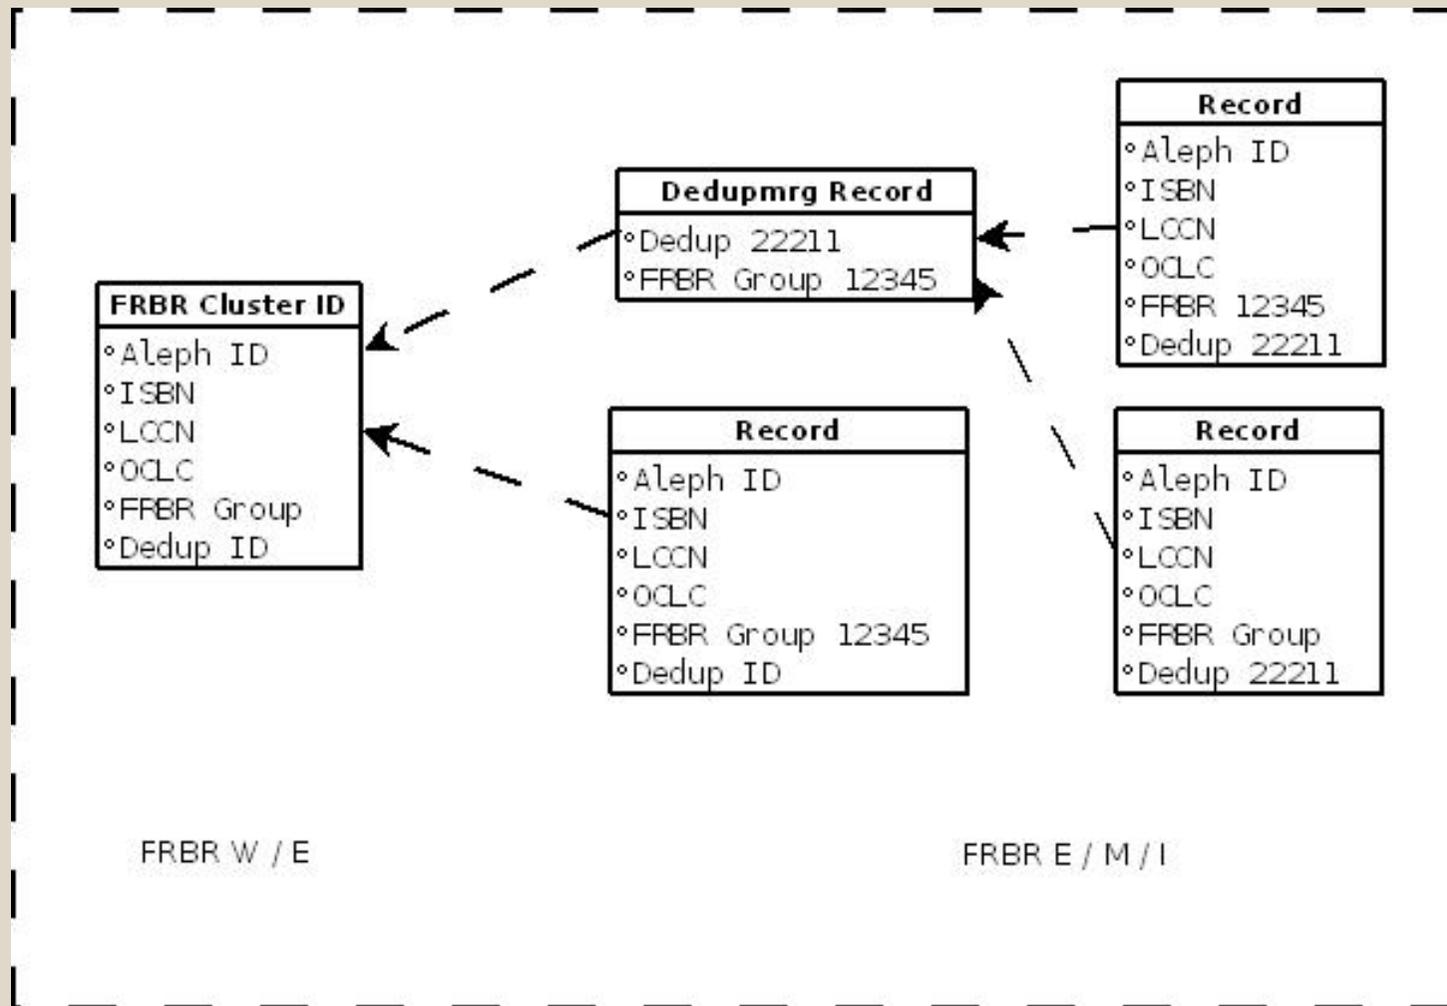

- Leaving off the SEO
- Proof of concept – simplicity
- Value Proposition:
 - FRBR & Dedup Ids
 - Identifier Management & Equivalence
 - Larger network of data sources
 - Integrate selected metadata with other systems

- Understand vendor question of ROI
- Not all investment is “heavy”
- Low barrier to doing linked data
- Problems / fixes tend to be general web design issues:
 - RESTful architecture
 - Persistent IDs
 - “Thoughtful” redirects

Primo “FRBR-ization”

- Manifestations:
 - Singleton Aleph Records
 - DedupMrg Cluster
 - DedupMrg groups have alt manifestations
 - Unfortunately, IDs don't resolve
- FRBR too rigid
- Bibo too flat
- Need Something *in between*

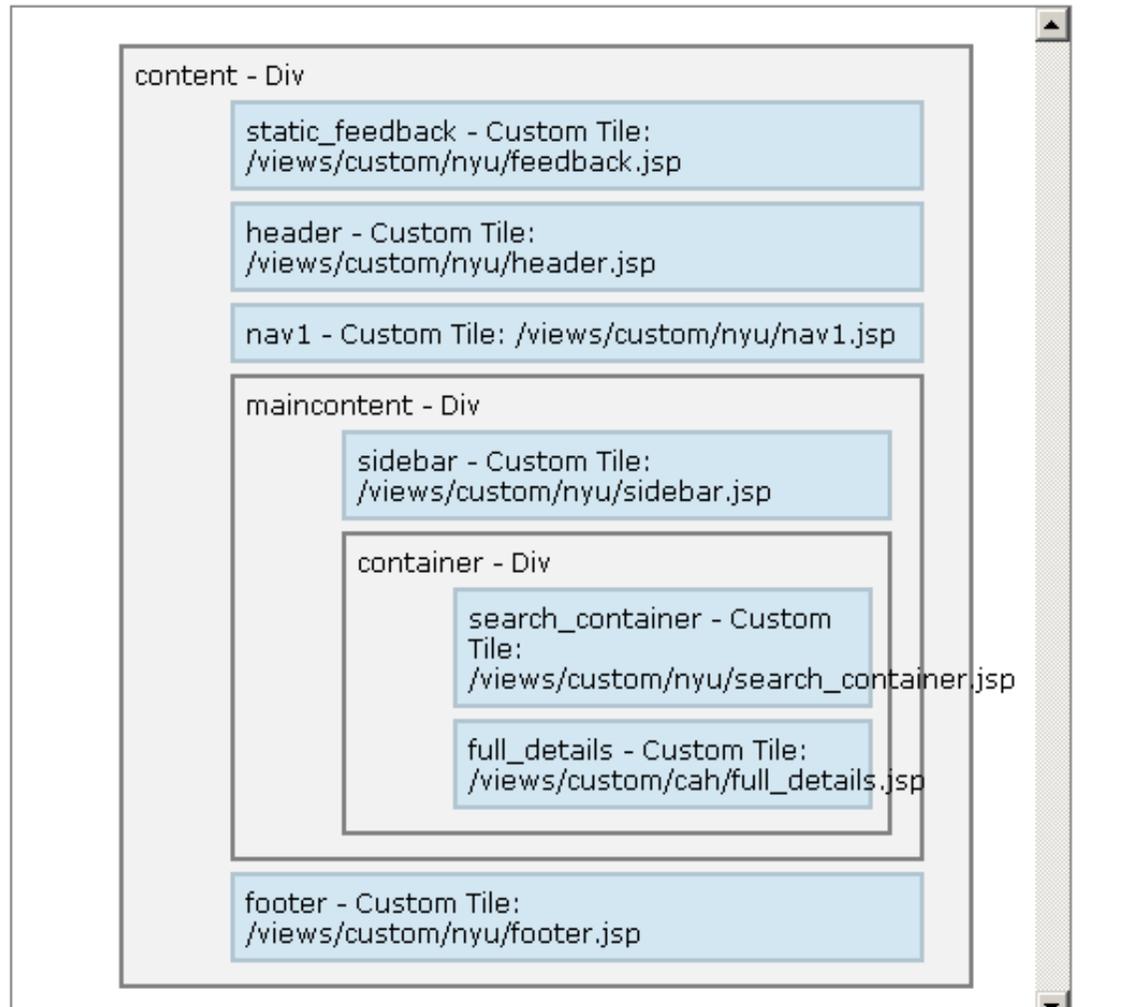

- Custom tileset; edited details.jsp (JSTL)
- Text strings from “display” elements
- Standalone div, property, content tags
- Convert to URIs for rel links?
- JQuery (or more JSP extensions?)
 - Enrich with descriptions of related works / manifestations (TODO)
 - Enrich with external data (TODO)

View Customization

View : NYURDF Page: Full Display ▾

    </c:when>
    <c:otherwise>
      <c:forEach items="${(result.values['lds02'])}" var="recid" varStatus="status">

```

Example JSP Code: Making a book

```
<div
  xmlns:dc="purl.org/dc/elements/1.1/"
  xmlns: [many more here]"
  about="http://primodev1.bobst.nyu.edu/primodev1.library/libweb/action/dlDisplay.do?onCampus=false&docId=${result.id}&group=GUEST&vid=NYURDF&institution=NYU&fromLogin=true#book"
  typeof="rdf:r:Manifestation">
```

Example JSP Code: Simple Properties

```
<div property="bibo:isbn"  
  content="{result.values['isbn']}[0]}">  
</div>
```

```
<div property="dc:subject"  
  content="{result.values['subject']}[0]}">  
</div>
```

Ex. (Psuedo)-Code: Funkier Business Logic

```
<c:set var=dup val=${results.dedup}>
<c:choose>
  <c:when test="fn:startsWith(dup,dedup)>
    <div rel="equivalentManifestation">
      <c:foreach
        items="${result.values['lds02']}"
        var = "recid">
        <div typeof="rdfs:Manifestation">
          <div property="dc:identifier"
            content="${recid}"></div>
        </div>
      </c:forEach>
    </div>
  </c:choose>
```

  [ a rdfs:Work ;  
    dc:identifier "21827719"@en_US  
  ].
```

- Request Enhanced DL functionality
- Possible Vocamp at DC2011?
 - Vocabulary for ID Management
 - (More) Lateral FRBR Relationships
- Linking to external data
 - lccn, lcsh, lcnaf, viaf
- More data modeling
- Preparation of raw dumps
- Re-work blank-nodes

Why do this?

- Not for SEO, else I'd use Microdata. 😊
- Primo processing as part of ID Mgt Strategy
 - Related Manifestations / Works =
 - Related *Identifiers!!*
- Other Relationships:
 - EAD to Bib to Collection to Digital Object
 - For certain types of dedups, use LD fields for other identifiers.

Questions?
