Voyager allows some personalization in the CAT
Client where the user can choose font and colors for work area

ALEPH clients can be fully translated

Both systems rely on the use of macros
by its users to speed up workflows in circ and cat

Could get better with more short cut definitions

System administration in Voyager is done through the SYSADMIN client, it is intuitive and most settings for the system can be done through it

System administration in ALEPH is done either by editing config files on the server or by using the AlephAdm client.

The AlephAdm client demands that you understand the nature of the system and what files or tables data are stored in

Scientific American.	Scientific american U:5

MARC...

Voyager files are stored in a sort of logical structure
and you can guess where things are happening

ALEPH files are spread all over and you need to know
where things are happening, I guess it makes sense if you know

ALEPH OPAC is more flexible
then Webvoyage

You have access to all of the
components in use and can change
them ... and they are plenty

```
voyager@sid:$more opac.ini
[Genera]

24HR=Y

[WebRecon]
ErrorFile=/ml/voyager/orebrodb/webvoyage/html/webconerr.htm
ExitPage=/ml/voyager/orebrodb/webvoyage/html/exit.html
```

Webvoyage doesn't give you total access to how the pages are constructed and there are plenty of things that you have to live with

Database structure

Both systems allow direct access to data in Oracle and provides documentation for structure

Voyager use a descriptive naming convention for tables so you can navigate the Table structure and understand what the different tables hold.

Bibliographic and item data are stored in the same database

ALEPH use a non descriptive naming convention for tables making it hard to Navigate if you do not know where to look

Bibliographic and item data are stored in separate databases / schemas

Process Job #?

Batch jobs in Voyager are initiated on the server and processed with the Reporter module and MS Access

Gives you control of output, but you must use Reporter and MS Access

Batch jobs in ALEPH can be initiated from inside a client by a user with sufficient rights

The screenshot shows the ALEPH Lån - Version 16.02 interface. The title bar indicates the database is JUL50 (JUL50) and the server is 193.10.208.70:6565 (16..). The main menu includes options like Historik, Krav och meddelanden till låntagare, Förnya / Kräv in, Beställningar, Rapporter, Bokningar, Fjärrmagasin, Låntagarposter, Kassatransaktioner, Statistik, Allmänt, Hantera databastabeller, Exemplar, Allmänt (elib), and Boken kommer (elib). A table displays loan records with columns for Streckkod, Hyllsign., Kö, Lån, and Låntagar-ID. The table contains two rows: one with Streckkod 11577000227110 and Hyllsign. Qa EKL, and another with Streckkod 11577000227111 and Hyllsign. Qa EKL, with a Lån value of 21. A sidebar on the left shows navigation options like [M] Exemplarlista (0/2), [E] Historik alla exemplar, [I] Exemplar (11577000227110), [H] Lånebeställningar (0), [L] Lån (0), [O] Historik (Senast uppdaterad), [S] Sammanfattande låneinforma, [B] Bibliografisk information, and [T] Triggerlista. The bottom section shows 'Exemplarinformation' with fields for Systemnummer (Exemplarsekvens) 218643 10, Filial Högskelebiblioteket, Samling -, Hyllsignum Qa EKL, Hyllsignum 2, Beskrivning, Exemplarstatus 60 dagar, Exemplarstreckkod 11577000227110, Exemplarnummer 0, and Senast återlämnad.

Streckkod	Hyllsign.	Kö	Lån	Låntagar-ID

ALEPH offers nifty serverside tools

```
Library Utilities
=====
A. File Administration and Building
C. Monitor Batch Jobs
D. Online Store/Restore Administration
E. Monitor Background Jobs
F. View Procedures and Files
G. Tables for Defining Database Structure
H. Library and Installation Report (Files, Tables and Definitions)
I. Formatting Data (PC, WWW, Reports)
J. Web and Server Configuration
K. ILL Tables
L. GUI Tables
M. GUI CATALOGING Tables
N. Z39.50 Management
O. ORACLE Management
P. Unicode Tables
Q. Data Loading, Import and Export Tables
R. Multimedia
S. Statistics
W. Server Management (Monitor, Stop, Start, Log Files)
X. Clean Up
Y. Node Management
Please select [exit]: █
```

ALEPH offers no certification

Voyager offers certification

100, 300, 400, 500

User community culture

A tradition of communicating problems user to user in the Voyager community.

The user group has become a problem solving resource. A lot of people are solving things by themselves, sometimes by being very creative. We are in the same boat mentality

ALEPH has a very loyal user group with confidence in the vendor and its ability to fix problems.

Interesting to see how these two user group cultures will blend

Both ALEPH and Voyager are fine systems, they get the job done
Both are patchworks with functionality added along the way

ALEPH gives the libraries more or less control of every aspect of the system, more than most libraries are interested in?

Voyager provides intuitive tools for interaction and maintenance, the drawback is that you don't have control of the system if you wish to tailor it to your unique needs.

Best of both worlds?

Voyager – table naming convention, sysadmin functionality, client gui, intuitive file/data structure

ALEPH – OPAC, server util, client functionality (batch job), control of system files

GOOD, BAD, UGLY?
