

Day 2 - Authority Control in Alma - Update on New and Upcoming Features	
Question	Answer(s)
For authority records of subjects is there a plan to make it SKOS compliant to support the linked data including URI pref label alt label etc. and can be used through the bibliographic records ?	Ex Libris plan is to provide the ability to catalog a Linked Open Data record and use URI/IRI within it. We plan to support all services including prefer and not prefer terms.
For authority records subjects we would like to enter the URI in Bibliographic record and have the search engine automatically knows the language to identify the descriptor	Ex Libris will be happy to work with the LoD working group on this topic as part of other improvement we are planning for publishing to schema.org. Please open an Idea Exchange in order to gather additional input from all customers.
Is Alma (or is it planned to be) able to support links to several different authority files, e.g. LC Authorities and GND, from the same title record?	While working with bibliographic records in the Metadata Editor, the record's linked data information is available for standard authorities such as LC and GND. See https://knowledge.exlibrisgroup.com/Alma/Product_Documentation/010Alma_Online_Help_(English)/040Resource_Management/040Metadata_Management/040Working_with_Bibliographic_Records#Using_Linked_Data_While_Working_with_Bibliographic_Records
