DIE ÖSTERREICHISCHE BIBLIOTHEKENVERBUND UND SERVICE GMBH

# FROM ALEPH TO ALMA IN THE AUSTRIAN LIBRARY NETWORK: A 10 YEAR PILGRIMAGE

IGELU 2022, CARDIFF, 14. SEPTEMBER 2022

**WOLFGANG HAMEDINGER (OBVSG)** 

## THE AUSTRIAN LIBRARY NETWORK (ALN): WHO ARE WE?

- Currently 70 voting members of the General Assembly
  - Austrian National Library
  - 21 Federal Universities
  - Austrian Academy of Sciences
  - Verbund für Bildung und Kultur (Education of teachers)
  - Universities of applied Sciences
  - Research institutions
  - Administrative and governmental bodies
  - Ecclesiastical libraries
- OBVSG: Central Office as legal basis
- Alma now as backbone for common services
  - 1 Network Zone
  - 70 Institution Zones
  - about 750 active libraries
  - nearly 300 libraries for external (holding) data

### **ALN: ORGANISATION**

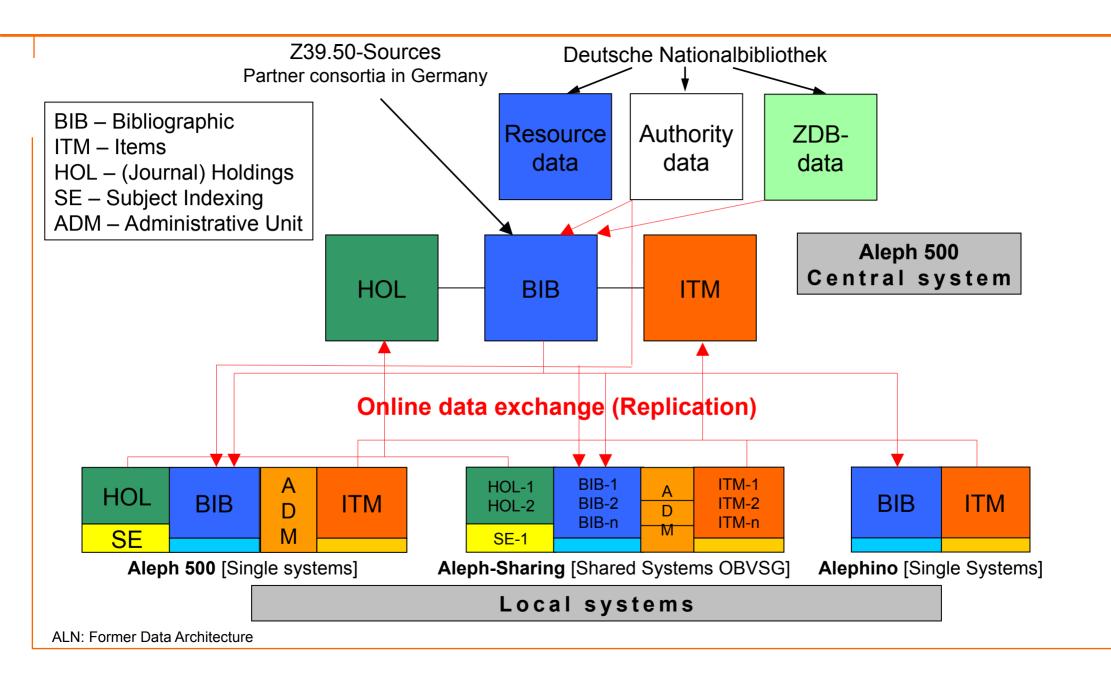

- Based on the law of 2002 about the Central Office:
  - "Die Österreichische Bibliothekenverbund und Service Gesellschaft m.b.H." (OBVSG)
  - = The Austrian Library Network and Services Ltd.
- Defined services for named member institutions by law
- Membership is voluntary for over 18 years now (especially for the universities)

- OBVSG
  - Owned 100% by the Federal Republic of Austria
  - Neutral institution independent of ministries and all members
  - Represents the network
  - Provides and develops central and integrated services
  - Rather strong position as an executive body
- General assembly
  - Every member represented, voting weight according to its "size"
  - Defined working groups (especially for strategic discussions)
  - Strategic decisions
  - OBVSG does not vote, but is allowed to make proposals and can veto decisions under defined circumstances
- Intense cooperation of network members including the central office

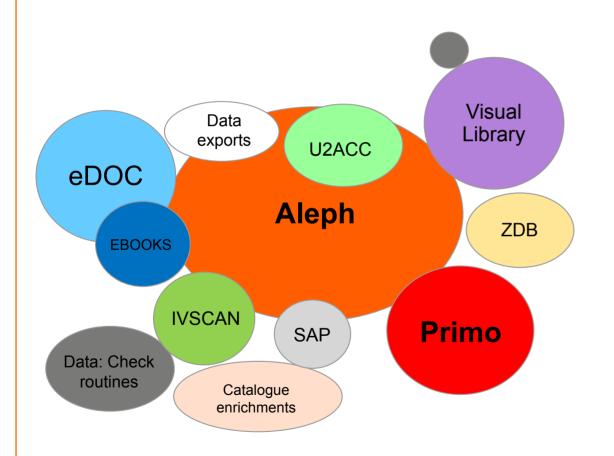

- University libraries get their budget from the university
- Universities negotiate contracts with the ministry for periods of three years
- General infrastructure is not funded by research promotion agencies in Austria
- OBVSG
  - Gets a fixed amount of money per year for defined basic services
    - This basic amount stayed the same for 19 years and was never changed
  - Gets (as of 2021) additional funding for extended duties (for the next 19 years maybe?)
  - All additional services have to be paid by customers
- No additional central budgets for the whole network any more
  - Every project has to be discussed and economically evaluated before realisation
  - Possible participants have to be convinced
  - "The gods help them that help themselves"

### **ALEPH AS A BASE: STATUS 2009 - BENEFITS**

- Almost homogeneous network structure since 1999
  - Started with pure Aleph systems
  - Later on Alephino systems were included
- Distribution of features over one central and many local systems brings
  - Flexibility
  - High degree of synergy
- Central database without duplicates as policy not a union catalogue for lucky historical reasons
  - Important leverage effects
- Bidirectional data replication between central system and local system
  - Every user benefits from data improvement automatically
- Lots of services built around the main system

### **OBVSG: SERVICES AROUND ALEPH**

- Primo: Central discovery solution
- eDOC: Cache and "glue" application for integrating various informations from different locations, including upload of electronic documents and remote indexing
- IVSCAN: Enrichment service for discovery with tables of contents scanned by the Austrian National Library
- Visual Library: Central repository solution
- EBOOKS: Supply of bibliographic data for e-book packages for acquisition purposes
- SAP: Interface to the financial system SAP
- U2ACC ("upgrade2acc"): Tool to link a local record to a central record via its network ID to benefit from all future corrections and improvements
- ZDB: Use and synchronisation of journal bibliographic records and corresponding holdings with the "Zeitschriftendatenbank Berlin", the largest database specialised on (printed) periodic publications

## **ALEPH AS A BASE: STATUS 2009 - PITFALLS**

- Lack of functionalities
  - Electronic resource management
  - Statistics and reporting
- Old fashioned technology
  - Only text based configuration
    - rather complex text files
    - difficult dependencies
  - Programming techniques
    - COBOL modules
    - almost no modern Web technology used
  - Oracle treatment
    - strange handling of Oracle databases due to historical reasons
- Aleph was a mature product but after so many years it started becoming a static system

### CHALLENGES FOR CHANGING SYSTEMS

- Bringing together a "critical mass" of members (including resources and funding) to start a change project which can succeed
- Find ways to allow remaining members to join later
- Change of internal data format
  - MAB2 (old data exchange format between German speaking countries) vs. MARC21
- Solutions for crucial functionality
  - Primo (on premise!)
  - Use of "Gemeinsame Normdatei (GND)" ("Integrated Authority File" of German speaking countries)
  - Established services

- Data privacy
- Integrated parallel operation of old and new systems for the transition phase of the whole network
  - Transition to Alma lasts several years
  - No necessity to work with more then one client and to leave the own system
    - No double burden
    - But: Needs bidirectional data conversion
  - Otherwise no acceptance of switch to Alma

 Elaborated concepts and suggestions by vendors needed!

## **TAKING PILGRIM'S STAFF**

2012 – 2013 Decision of 14 institutions to start a procurement to replace Aleph and prepare necessary documents

2010 - 2013Strategic working groups and discussions within the Network general assembly

2009 Start of discussions to replace Aleph

Conception 2016 2. half: Preparation of

2016 1. half: implementation

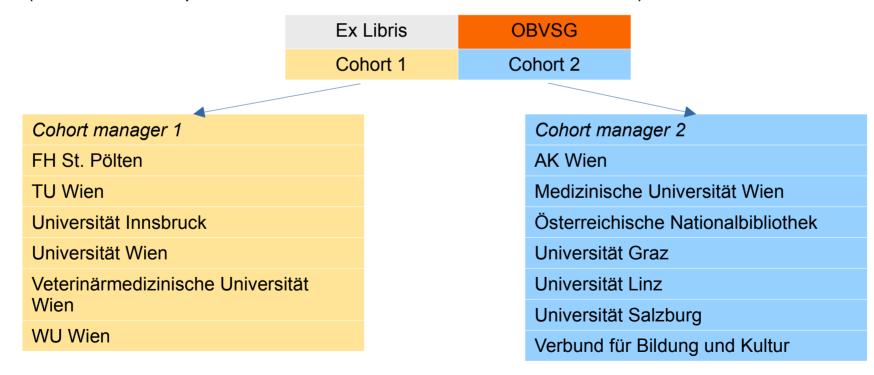

2013 - 2015 Examination of proposals Tests Negotiations

15.09.2015 Awarding contract to Ex Libris

29.10.2013 Full EU tender

## **RESULTS: IMPLEMENTATION IN GROUPS ("COHORTS")**

- 3 groups
  - Cohort 1 (6 libraries)
  - Cohort 2 (7 libraries)
  - OBVSG (Central office; Implementation of central services and Network Zone)

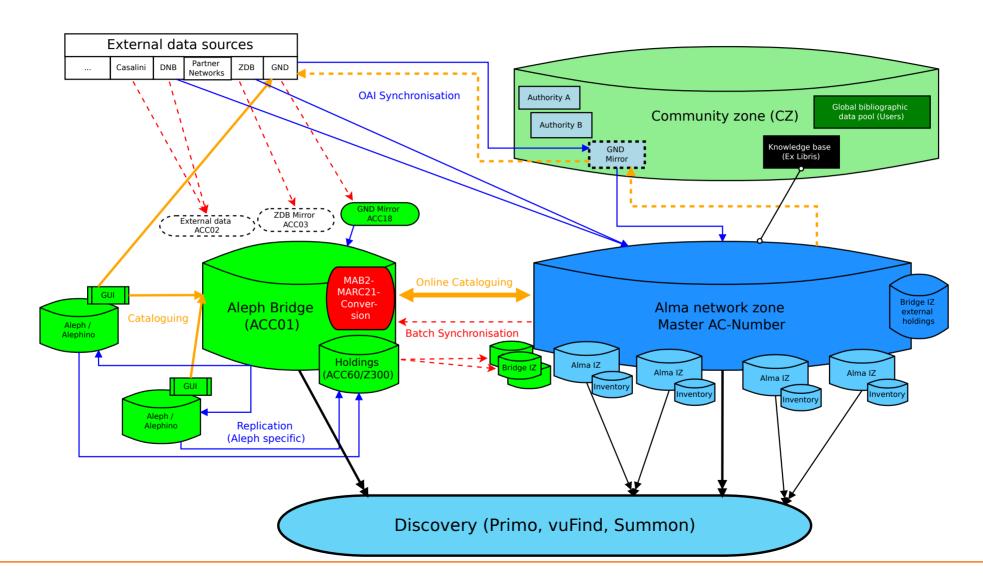

→ 16-18 members of project team

## **PROJECT PHASES AND TIMELINE**

	2016						2017								2018																	
	1	2	3	4	5	6	7	8	9	10	11	12	1	2	3	4	5	6	7	8	9	10	11	12	1	2	3	4	5	6	7	8
Design																																
Getting Ready																																
Imp Cohort 1																																
Imp Cohort 2																																
Imp Central																																
Post-Go-Live																																

Phase	Start	End
Design Phase	26.01.2016	09.08.2016
Getting Ready	10.08.2016	31.01.2017
Implementation Cohort 1	10.01.2017	18.08.2017
Implementation Cohort 2	01.07.2017	22.01.2018
Implementation Central	10.01.2017	19.03.2018
Post-Go-Live	19.08.2017	31.07.2018

## PARALLEL OPERATION (TRANSITION PHASE 2): (MARCH) 2018 - END OF 2021

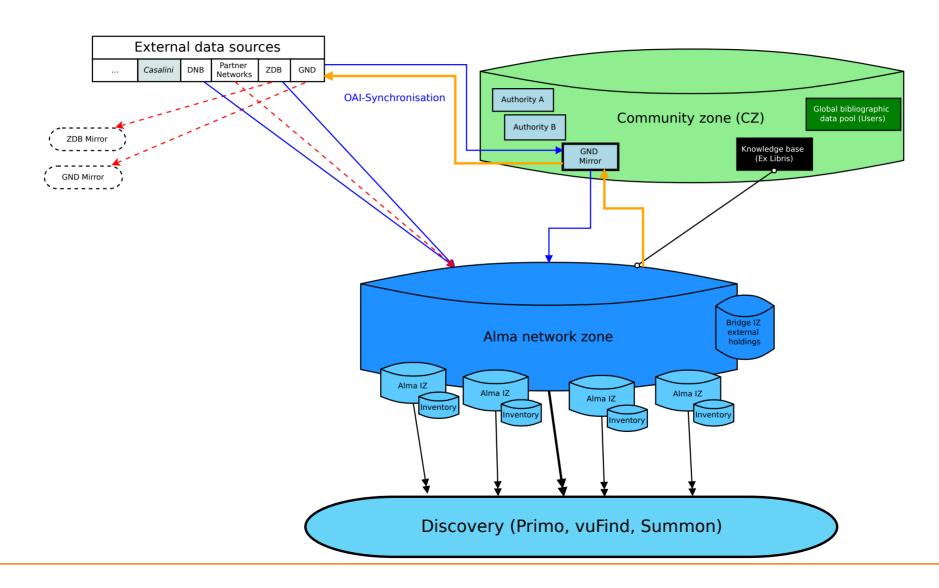

#### FROM COHORTS TO WAVES

- Wave 3 [3]: Production September 2018
- Wave 4 [8]: Production January 2019
- Wave 5 [8]: Production September 2019
- Wave 6 [9]: Production January 2020
- Wave 7 [9]: Production September 2020
- Wave 8 [11]: Production January 2021
- Wave 9 [7]: Production September 2021
- "Wave 9a" [1]: Production December 2021

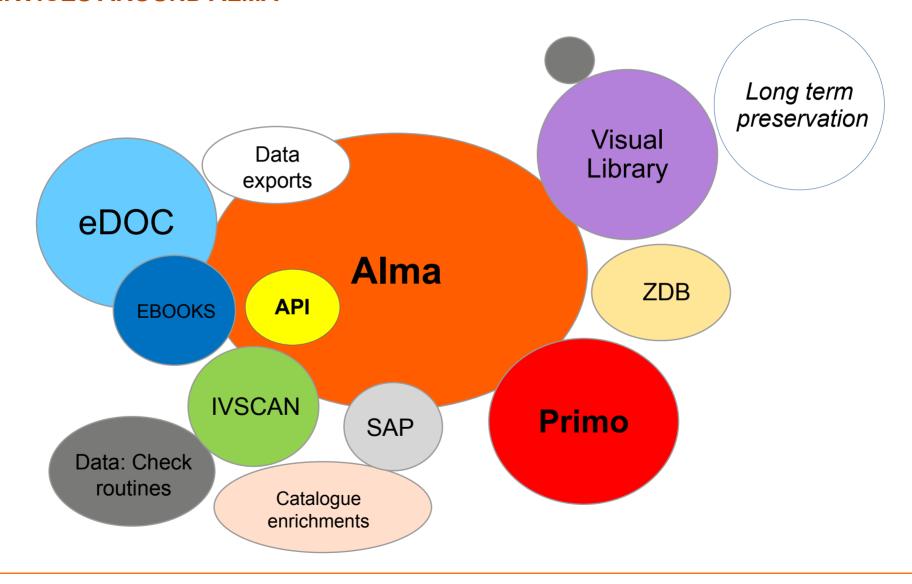

Final: Shutdown of "Aleph-Bridge"
28<sup>th</sup> February 2022

- Migration was collaborative work of
  - Ex Libris
  - OBVSG
  - Single Library
- OBVSG was responsible for
  - General project coordination on the side of customers
  - Lead of migration for systems run by OBVSG
- OBVSG did parametrisation, data preparation and data loading into Alma for
  - (New) participants without an Aleph or Alephino system
  - Smaller libraries using the Aleph sharing model with only cataloguing

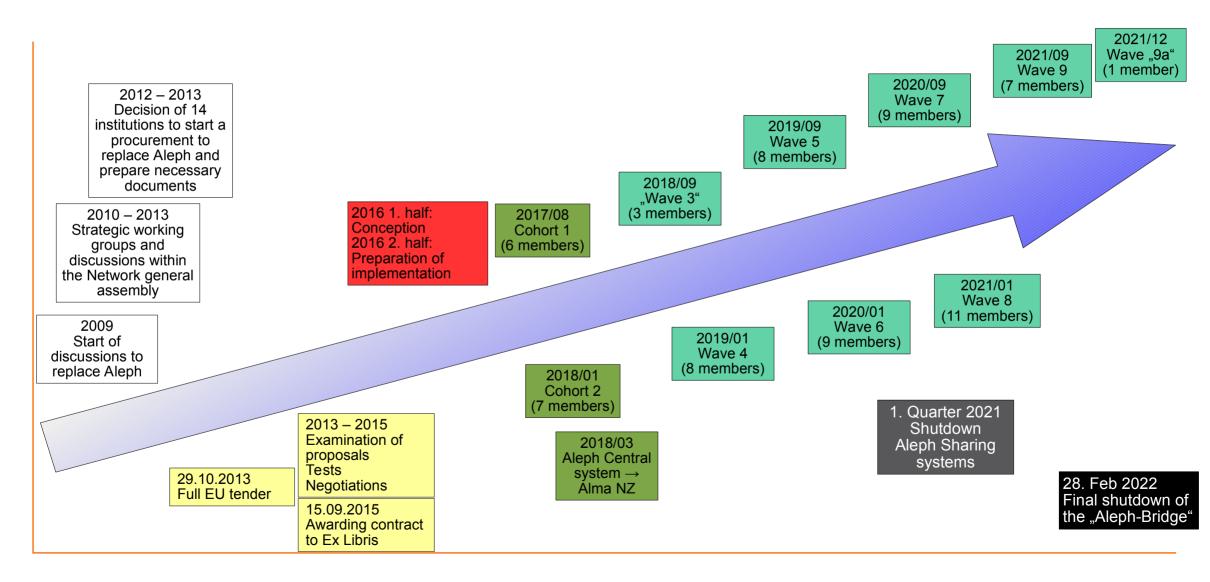

## **ALMA: FINAL CONSORTIAL TOPOLOGY**

## **OBVSG: SERVICES AROUND ALMA**

## **PILGRIMAGE TO DESTINATION**

### **CONCLUDING REMARKS**

- We overcame all challenges, despite of
  - Lots of necessary functional input and high workload on "Functional Experts"
  - Appropriate continuation of the old system
  - Too short time frames even with detailed planning
  - Higher efforts than expected
  - Limited resources of staff able to work on the necessary level
  - Surprises during the project
- Cooperation with Ex Libris
  - Committed developments were in time
  - Narrow time frames
  - Top developers at Ex Libris
  - Discussions to find good solutions worked

- Alma vs. Aleph
  - Alma did not start at the same level of sophistication as Aleph
  - Improvement could be seen within the last years
  - Seems to be a good base for new possibilities of collaboration
  - Hopefully Alma will be the main library administration system for at least the next decade
- Decision for Alma was still "in time": Missing and special features for consortia and our libraries could be added as result of the whole process

 So we seem to be well prepared for new adventures now

## THANK YOU FOR YOUR ATTENTION
