

Utilizing Analytics for Collection Development

Presenter:

Davin Pate

Assistant Director for Scholarly Communications and
Collection. University of Texas at Dallas.

Chair IGeLU/ELUNA Analytics Community of Practice
(COP)

THE UNIVERSITY OF TEXAS AT DALLAS
Eugene McDermott Library

What This Presentation Will Cover

Overview of what led to the different collection development reports.

Covering different type of reports that and going over some of the benefits and issues with the different approaches.

Providing some tips on what to watch out for when you are recreating the reports.

Note: All reports in this presentation will be in the Community Zone under UTD. Some may need to be altered to work for your institution.

What Occurred

- September 2020 – New fiscal period began with reductions in budgets due to Covid.
- Needed a way for selectors to see the collection from a macro perspective to assist with ordering.
- What started out as a few base reports for checking orders and monitoring expenditures resulted in the development of a more comprehensive set of collection analysis reports.

What the Data Provided

- Ability to see what was in the collection.
- See what was in demand by students, faculty and staff.
- Identified collection gaps and address them.
- Gave a framework for other potential projects.

SQL Examples (To Make Your Life Easier)

```
Evaluate('regexp_substr(%1,"[0-9]{4}", 7,1)', "Bibliographic Details"."BIB 008 MARC")
```

Provides the publication date without the "additions".

Note: Use a bibliographic details field, change the statement to the one above and then use a customized heading to label it as Publication Date. An example of a heading change is included on the additional information slide.

SQL Examples (To Make Your Life Easier)- Continued

First Subject Term

```
evaluate('regexp_substr(%1,"[^\;]+", 1,1)',REPLACE("Bibliographic  
Details"."Subjects",';','\;'))
```

Second Subject Term.

```
evaluate('regexp_substr(%1,"[^\;]+", 1,2)',REPLACE("Bibliographic  
Details"."Subjects",';','\;'))
```

You can add additional terms as needed, by changing the (1,2) the second numerical value of the expression.

You will want to use a customized heading to label the column correctly.

This allows for separation of subjects. Good if you want to provide reports that have single subject focus. Can also be helpful with cataloging in some limited situations.

SQL Examples (To Make Your Life Easier)- Continued

Time Stamp Limiters:

This Bib time stamp is useful to pull bibs created between 1 and 2 months ago. You can adjust the variables to increase range. Use Creation Date under Bibliographic Details with the Physical Item Subject Area. You can also use item creation date as an alternative, if you are looking for new individual items, rather than new bibliographic records.

```
"Bibliographic Details"."Creation Date">= (TIMESTAMPADD(SQL_TSI_month,-2, CURRENT_DATE)) AND "Bibliographic Details"."Creation Date"<= (TIMESTAMPADD(SQL_TSI_month,-1, CURRENT_DATE))
```

Portfolio Time Stamp Limiter is used to bring in only portfolios created in the past month. Use Portfolio Creation Date under Portfolio Creation Date with the E-inventory subject area.

```
"Portfolio Activation Date"."Portfolio Activation Date" >= (TIMESTAMPADD(SQL_TSI_month,-1, CURRENT_DATE))
```

Organizational Tips

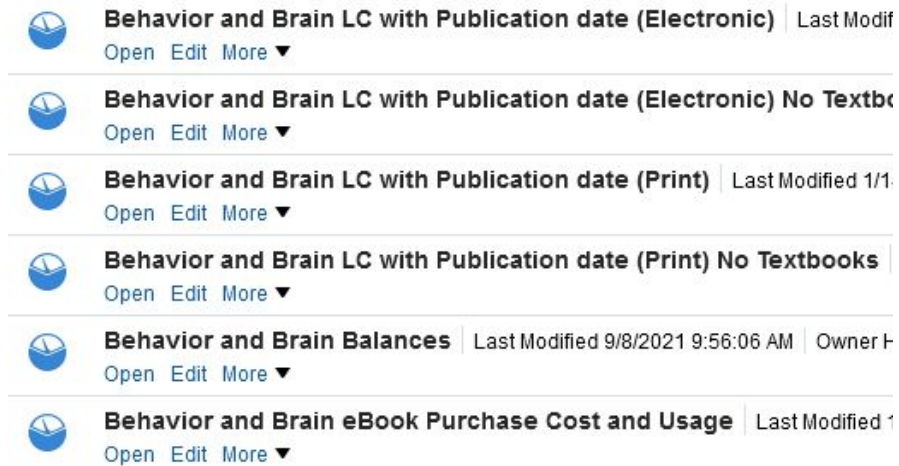

2 Think of structuring a base report and then save that report.

2 Change the facets and/or limiters of the base report to provide views of the data without compromising the core base report.

2 Organize the naming conventions of the reports to reflect what they are. As you create more and more variations organization will be paramount.

Organized each of the reports under the dashboard that would eventually become the liaison/selector individual dashboards.

Identify print/electronic reports and use similar naming conventions between dashboards to quickly identify the reports and keep everything organized.

Approaches On Limiting

LC Limiting

• Benefits:

- Faster reports – especially with dashboard when utilizing dashboards.
- Generally, less time consuming to create.

• Issues:

- Will pull everything in an LC area. May need to spend time on refining/limiting the report.
- May need to create additional reports to reflect more nuances in the collection.

Subject Limiting

• Benefits:

- Can narrowly tailor a report to specific subjects.

• Issues:

- The more subjects included in the report the slower the report responds. Reports can take 10+ minutes to return results.
- May need to factor in subject variations to prevent irrelevant/inaccurate returns.

Three Data Points Worth Examining Within Your Collection

Sample Report: Lets Talk About Electronic Usage by LC

I have not found a preferred way to create a report that reflects year by year usage utilizing the E-Inventory subject area.

The following report will provide lifetime usage on a particular LC but cannot be limited by a specific usage year. This limits the usability of electronic usage reports.

An ideal fix would be the inclusion of a date range option to limit the counter usage data to specific periods of time.

Additional Information

The screenshot shows a configuration panel with the following elements:

- Folder Heading:** Bibliographic Details
- Column Heading:** Publication Date
- Custom Headings
- Contains HTML/JavaScript/CSS Markup
- Rule (Totals Row):** Default (None)
- Column Formula:** Evaluate('regexp_substr(%1, "[0-9]{4}", 7, 1)', "Bibliographic Details"."BIB 008 MARC")

Example of changing a column heading. This typically is recommended when you adjust a column formula.

```
Evaluate('regexp_substr(%1, "[0-9]{4}", 7, 1)', "Bibliographic Details"."BIB 008 MARC") NOT IN ('NULL', '9999')
```

Example of: Bib 008
Publication Date – with
removal of any null or 9999
results: Used as a filter.
