

Dangelu

Annual report 2026 for IGeLU National User Group (INUG)

Who we are

There are 16 members in Dangelu consisting of a wide selection of libraries with different needs and user groups. University and Educational libraries make up the majority - making most of the higher education and research libraires in Denmark an Alma/Primo VE environment. Of the 16: 14 make up the consortia and two stand alone.

The Dangelu group meets twice a year. The meetings create a common point of contact for Ex libris. Members share ideas, exchange practical experiences and knowledge, sparring and coordination of national issues wished to be addressed by Ex Libris. The members take turn to host the meeting. On the Dangelu website you can read more about the organization of the group, members and prior meetings.

Main events since the last IGeLU meeting

In Denmark two libraries have made the switch to Primo NDE. The remaining libraries are at different stages in preparing for the switch. Timing, manpower and technical setup all play a role for the different libraries.

The institutions in Denmark have been focusing on their own organizational issues and working on workflows, integrations, implementations and improvements across all Ex Libris products.

Some libraries have started to look into Library Open workflows and the possibilities the tool provides. It is still in the early stages of use.

The fine-tuning of the Resource Sharing Workflow integration into our national broker system is an ongoing issue so the best possible setup regarding the ISO 18626 standard is achieved.

Consortia: The work on streamlining the NZ records is in progress. The first major jobs have been run for the reduction of duplicate records and now the focus is on cleansing the merged records for duplicate fields.
